

YEAR 5  
NUMBER: FRACTIONS

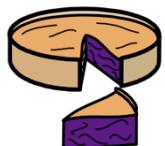

**NC. Objective:** To add and subtract fractions with denominators that are multiples of the same number and multiply mixed numbers and improper fractions by whole numbers.

1. Camillo walked  $\frac{7}{8}$  of the mountain path but slipped back  $\frac{1}{4}$  of the path because of the icy terrain.

How much of the path had Camillo completed after he slipped?

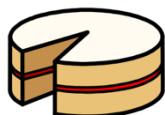

2. At the Winter Feast, Polixenes ate  $\frac{3}{5}$  of a pie and later ate  $\frac{1}{10}$  more.

How much pie did he eat in total?

Draw a bar model showing tenths to help you add the fractions.

3. Hermione baked  $2\frac{3}{4}$  cakes for the first day of Leontes' birthday celebrations. The celebrations lasted for 5 days. Leontes requested the same number of cakes each day.

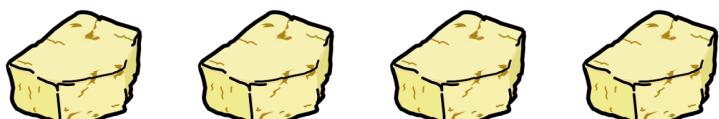

How many cakes did Hermione bake altogether?

4. The Winter Feast needs  $4\frac{1}{2}$  barrels of juice for each of the 6 tables.

How many barrels will be needed in total?

5. At dinner, the guests ate different fractions of a parmesan wheel.

Put the fractions in order from smallest to largest. Show your working using a bar model or common denominators.

$$\frac{3}{4}$$

$$\frac{5}{8}$$

$$\frac{7}{12}$$

$$\frac{2}{3}$$
